

Patch ANY_VERSION - 155198

For: Any aXes Version
Issued: Jan 29, 2016
Prerequisite:

Includes & Supersedes: none this is a standalone patch.

Fixes/enhancements included in this hotfix:

CCS/CTS	Description	Engine	Impacted Objects
155198	Enhancement: Support for VLF ONE	TS1/TS2	/ts/skins/vf_sy420_rts_ONE.htm

Installation Instructions – IFS files

1. Copy the file to the following folder:

Folder	Files to Copy for Backup
<aXes root folder> / ts/skins	vf_sy420_rts_ONE.htm
Note Carefully: Never backup existing extension definition files by copying or renaming existing files in the screens folder so that the backed up file names are still prefixed Extension_. Such file copies will remain in the system as valid extensions and may cause namespace duplication(s) that interfere with the proper execution of the replacement extension.	

2. Check permissions for the file you have added.

Enter the command on the IBMi:

WRKLNK `<axes_root>/ts/skins/vf_sy420_rts_ONE.htm`

And change <axes_root> with the root folder of your aXes installation.
